Surge Protective Device

## 서지보호기란?

### What is a surge protective Device?

- 서지보호기(Surge Protective Device)란 낙뢰 충격 전압으로부터 전력 설비의 손상을 방지하기 위한 기기로 낮은 전압의 전기 및 전자 장치 또는 회로에서의 서지 전압을 제한하기 위해 하나 이상의 파뢰기와 장비 부품으로 구성된 보호 장치입니다. 전력계통의 전원선, 통신선, 신호선 등의 도체를 통하여 발생, 침입되는 과도 이상 전압을 Surge라 하며 Surge의 침입으로 인하여 전자 기기, 전자 부품의 파손, 소프트웨어의 오동작 등 많은 피해가 초래되고 있으며 이러한 장비를 보호하기 위하여 서지보호기(Surge Protective Device : SPD)가 필요합니다.
- A surge protective Device is a device that prevents damage to power equipment from lightning shock voltage. It is a protection device composed of one or more arresters and equipment parts to limit the surge voltage in low voltage electrical and electronic devices or circuits. The transient abnormal voltage generated and intruded through conductors such as power line, communication line, and signal line of power system is called a surge, and a surge protective device (SPD) is required to protect these devices from the intrusion of a surge, which causes a lot of damage, such as damage to electronic devices and components, software malfunction, etc.
